TASK 1: BRAKE INSPECTION, MEASUREMENT AND REPLACEMENT

Task reference: Block_5_Task_1_Brake_Inspection_and_Replacement

Task overview

Block
Block 5 - Diagnostic Thinking and Complex Repairs

Weeks
Weeks 41-50

Duties covered
1, 2, 3, 4, 5, 6, 7, 8, 9, 10

KSBs covered
K10-K18, S6-S14, B1, B2

Estimated duration
60 minutes

Assessment type
Practical / knowledge / documentation

Scenario

A vehicle has been reported with worn brake components during inspection. You must inspect, measure and remove/refit brake components, record technical data and explain any customer recommendations.

Objectives

- Carry out brake inspection using safe working practices.
- Measure brake component condition and compare with manufacturer specification.
- Remove and replace brake pads/discs or equivalent components as instructed.
- Record torque settings, thickness measurements and recommendations.
- Explain how evidence supports diagnostic and customer communication decisions.

Materials you need at the workstation

- Light vehicle
- Replacement braking components as required
- Manufacturer technical information
- Brake measuring tools, torque wrench and general tools
- Dial gauge if disc run-out is included
- Apprentice Assessment Record

Complete all relevant fields. Enter N/A where a field does not apply.

Practical task instructions

1. Ensure your working environment is safe and the vehicle is correctly prepared before starting work.
2. Carry out a brake inspection, including relevant measurements of brake discs, pads and visible components.
3. Remove and replace the brake components instructed by the assessor.
4. Tighten all disturbed fasteners to the manufacturer-specified torque and follow any renewal or angle-tightening instructions.
5. Record the correct manufacturer torque settings and any customer recommendations.
6. Complete the required brake safety and function checks with the assessor before vehicle release, then reinstate the workstation.

Vehicle or equipment details

Vehicle make

Mileage / hours

Vehicle model

Engine size / system type

Registration / fleet number

VIN / chassis / equipment ID

Work completed and safe working

Brief description of work carried out and any further recommendations

PPE worn and special precautions taken

Technical data and measurements

Measured disc run-out

Run-out max tolerance

Disc measured thickness

Disc minimum thickness

Minimum pad thickness

Wheel torque setting

Caliper/carrier torque

Other torque settings

Special tools including any required calibration

Knowledge questions

1. State the manufacturer brake pad minimum thickness.

2. Explain what is meant by the term brake fade.

3. What recommendations should be given to the customer when new pads and/or discs have been fitted?

Knowledge questions continued

4. Name a typical customer complaint that may require checking brake disc run-out.

5. What effect can excessively worn pads and/or discs have on braking performance?

6. Explain how you confirmed the repair was safe and complete before returning the vehicle.

7. Identify any further work, customer authorisation or documentation required.

Assessor observation notes

Record observations, evidence reviewed and any areas requiring further development

TASK 1: BLOCK 5 APPRENTICE ASSESSMENT

Declarations, sign-off and assessment decision

Assessment declarations

Apprentice declaration: I confirm that the work recorded in this assessment document is my own work and that I completed the task under the conditions stated.

Assessor declaration: I confirm that I have observed and/or reviewed the evidence recorded in this document and that the assessment decision is accurate.
