TASK 4: SUSPENSION COMPONENT REPLACEMENT AND ALIGNMENT PREPARATION

Autocare Technician Level 2 | Block 5 | v2.1

TIME	EVIDENCE	PROGRAMME POINT
60 minutes	**Practical | Knowledge | Documentation**	**Weeks 41-50**

Your task

A vehicle has been reported with a worn suspension component. You must inspect the component, remove/refit the part as instructed, record torque data and identify whether alignment or further checks are required.

What you must do

1. Prepare the vehicle and raise/support it safely where required.
2. Inspect the relevant suspension component and confirm the fault.
3. Remove and refit the component instructed by the assessor/workplace mentor.
4. Record correct torque settings and any alignment implications.
5. Reinstate the vehicle/workstation and explain recommendations.

What good evidence looks like

SAFE SETUP

Suitable PPE, a prepared work area and controlled vehicle or equipment.

CORRECT METHOD

A logical sequence using the relevant procedure and technical information.

ACCURATE EVIDENCE

Actual readings, findings and actions recorded clearly and precisely.

SOUND DECISIONS

Appropriate recommendations, referral or authorisation supported by evidence.

You will need

- Light vehicle or suspension rig
- Replacement component as required
- Manufacturer technical information
- Torque wrench and general tools
- PPE and Apprentice Assessment Record

SOW ALIGNMENT

Block 5 - Diagnostic Thinking and Complex Repairs
Duties: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10 KSB evidence focus: K10-K18, S6-S14, B1, B2
Task reference: Block_5_Task_4_Suspension_Component_Replacement

Measurements and technical checks

Component replaced		Suspension type	
Top mounting torque		Bottom mounting torque	
Wheel torque setting		Alignment required yes/no	
Visible tyre wear		Post-repair check result	

Special tools, equipment or calibration requirements

Task evidence

PPE and precautions used

Safety-critical findings and immediate action

Work completed, findings and recommendations

Knowledge check

1. What safety precautions apply when working with suspension components?

2. What defects can be found on ball joints, bushes or dampers?

Knowledge check - continued

3. (a) How can a worn suspension component affect handling? (b) Why may alignment be required after replacement?

4. Why must torque settings be recorded?

5. (a) How would you explain the repair to a customer? (b) What quality checks are needed before releasing the vehicle?

Assessor/Workplace Mentor observation

- ☐ Inspect suspension components using safe working practices.
- ☐ Remove and refit a suspension component as instructed.
- ☐ Record manufacturer torque settings and relevant measurements.
- ☐ Identify how the component affects handling and tyre wear.
- ☐ Explain alignment and customer recommendation requirements.

Autocare Level 2

Released ADAS knowledge questions - retained from the portal source

ADAS K17 — repair checks and calibration

For suspension replacement and alignment preparation, use manufacturer information for a vehicle or a clearly labelled case study:
1. Explain whether the work could affect ADAS and identify the required checks.
2. Explain any relevant static and dynamic calibration methods and equipment, or why specialist advice is needed.
3. Record your information source and referral decision. Do not assume every repair requires calibration or carry out work beyond your authorised role.

Your answer

ADAS K18 — driver assistance and responsibilities

Use a vehicle or clearly labelled case study from the suspension/alignment task. Identify one affected driver-assistance feature and explain whether it is passive or active. Explain the driver’s responsibilities and, within the levels of driving automation, identify the level supported by the information provided. Name the information source; do not assume features or capabilities that the example does not show.
