TASK 4: ENGINE MANAGEMENT SENSOR CHECK AND HANDOVER

Autocare Technician Level 2 | Block 7 | v2.1

TIME	EVIDENCE	PROGRAMME POINT
60 minutes	**Practical | Knowledge | Documentation**	**Weeks 61-70**

Your task

A vehicle has an engine management concern. You must carry out a basic non-invasive sensor check using a scan tool or suitable method, record outputs and explain the evidence and next steps.

What you must do

1. Prepare the vehicle and confirm the reported symptom.
2. Locate the relevant sensor/component as instructed.
3. Check sensor output or scan data using suitable equipment.
4. Record results and explain findings to the assessor/workplace mentor.
5. Reinstate the vehicle/workstation and complete documentation.

What good evidence looks like

SAFE SETUP
Suitable PPE, a prepared work area and controlled vehicle or equipment.

CORRECT METHOD
A logical sequence using the relevant procedure and technical information.

ACCURATE EVIDENCE
Actual readings, findings and actions recorded clearly and precisely.

SOUND DECISIONS
Appropriate recommendations, referral or authorisation supported by evidence.

You will need

- Light vehicle or engine management rig
- Scan tool or multimeter as instructed
- Manufacturer technical information
- PPE and Apprentice Assessment Record

SOW ALIGNMENT

Block 7 - Advanced Workshop Practice and Communication
Duties: 1-10 KSB evidence focus: K14-K20, S10-S15, B1, B2

PPE and precautions used

Safety-critical findings and immediate action

Work completed, findings and recommendations

Knowledge check

1. Why should fault codes not be treated as automatic proof of a failed part?

2. What is live data and how can it support diagnosis?

Knowledge check - continued

3. (a) Why must customer explanations avoid technical jargon? (b) What checks should be made before replacing a sensor?

4. How can engine management faults affect emissions?

5. (a) What evidence should be recorded on the job card? (b) When should further diagnosis be authorised?

Assessor/Workplace Mentor observation

- ☐ Identify relevant engine management components.
- ☐ Use scan data or basic testing to check sensor operation.
- ☐ Record outputs and DTCs accurately.
- ☐ Explain findings in customer-friendly language.
- ☐ Recognise when further diagnosis or referral is needed.
