TASK 4: BASECOAT, CLEARCOAT, FLASH-OFF AND CURING CONTROL

Vehicle Damage Paint Technician Level 3 | Block 5 | v1.1

TIME	EVIDENCE	PROGRAMME POINT
60 minutes	**Practical | Knowledge | Documentation**	**Weeks 57-71**

Your task

A panel or test piece requires controlled application of basecoat and/or clearcoat. You must follow the material process, monitor flash-off and curing conditions, and inspect for common application defects.

What you must do

1. Confirm product data, panel preparation and safety controls before application.
2. Apply or simulate the coating process using correct distance, angle and overlap.
3. Record coat sequence, flash-off times, booth or curing settings and observations.
4. Inspect the panel for dry spray, runs, poor coverage, dirt nibs or edge issues.
5. Record corrective actions, evidence and any next-stage recommendations.

What good evidence looks like

SAFE SETUP

Suitable PPE, a prepared work area and controlled vehicle, component or equipment.

CORRECT METHOD

A logical sequence using the relevant procedure and technical information.

ACCURATE EVIDENCE

Actual readings, findings and actions recorded clearly and precisely.

SOUND DECISIONS

Appropriate recommendations, referral or authorisation supported by evidence.

You will need

- Prepared test panel or repair panel
- Basecoat/clearcoat materials or simulated materials
- Spray gun, booth or training bay, bake/IR/UV information where applicable
- Product data sheets, PPE/RPE and inspection lamp
- Application and curing record

SOW ALIGNMENT

Block 5 - Spray Equipment, Booths, Application and Curing
Duties: D1, D4, D6, D7, D8, D9 KSB evidence focus: K1-K3, K5-K9, S1, S3-S5, B1, B6
Task reference: Block_5_Task_4_Basecoat_Clearcoat_Flash_off_and_Curing_Control

Task evidence

PPE and precautions used

Safety-critical findings and immediate action

Work completed, findings and recommendations

Knowledge check

1. Why must flash-off time be controlled between coats?

2. How can gun distance and overlap affect the finish?

Knowledge check - continued

3. (a) What can cause runs, dry spray or poor coverage? (b) Why must curing settings match product or equipment data?

4. How should dirt nibs or minor finish defects be recorded?

5. (a) Why is clear communication needed before panel handover? (b) What evidence should be captured from the application task?

Assessor/Workplace Mentor observation

- ☐ Apply or simulate basecoat and clearcoat stages using a controlled method.
- ☐ Identify common defects linked to application technique or environment.
- ☐ Record settings, timings, QA findings and improvement actions.
- ☐ Monitor flash-off, coat sequence, wet edge and curing requirements.
- ☐ Use product and booth data to support safe and compliant practice.
