TASK 3: BRAKE INSPECTION, MEASUREMENT AND REPLACEMENT

Autocare Technician Level 2 | Block 5 | v2.1

TIME	EVIDENCE	PROGRAMME POINT
60 minutes	**Practical | Knowledge | Documentation**	**Weeks 41-50**

Your task

A vehicle has been reported with worn brake components during inspection. You must inspect, measure and remove/refit brake components, record technical data and explain any customer recommendations.

What you must do

1. Ensure your working environment is safe and the vehicle is correctly prepared before starting work.
2. Carry out a brake inspection, including relevant measurements of brake discs, pads and visible components.
3. Remove and replace the brake components instructed by the assessor/workplace mentor.
4. Tighten all safety-critical components to the full manufacturer-specified torque and record the settings used.
5. Record the correct manufacturer torque settings and any customer recommendations.
6. Reinstate the vehicle and workstation to a safe, clean condition.

What good evidence looks like

SAFE SETUP
Suitable PPE, a prepared work area and controlled vehicle or equipment.

CORRECT METHOD
A logical sequence using the relevant procedure and technical information.

ACCURATE EVIDENCE
Actual readings, findings and actions recorded clearly and precisely.

SOUND DECISIONS
Appropriate recommendations, referral or authorisation supported by evidence.

You will need

- Light vehicle
- Replacement braking components as required
- Manufacturer technical information
- Brake measuring tools, torque wrench and general tools
- Dial gauge if disc run-out is included
- Apprentice Assessment Record

SOW ALIGNMENT

Block 5 - Diagnostic Thinking and Complex Repairs
Duties: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10 KSB evidence focus: K10-K18, S6-S14, B1, B2
Task reference: Block_5_Task_3_Brake_Inspection_and_Replacement

Disc measured thickness		Disc minimum thickness	
Minimum pad thickness		Wheel torque setting	
Caliper/carrier torque		Other torque settings	

Special tools, equipment or calibration requirements

Task evidence

PPE and precautions used

Safety-critical findings and immediate action

Work completed, findings and recommendations

Knowledge check

1. State the manufacturer brake pad minimum thickness.

2. Explain what is meant by the term brake fade.

Knowledge check - continued

3. (a) What recommendations should be given to the customer when new pads and/or discs have been fitted? (b) Name a typical customer complaint that may require checking brake disc run-out.

4. What effect can excessively worn pads and/or discs have on braking performance?

5. (a) Explain how you confirmed the repair was safe and complete before returning the vehicle. (b) Identify any further work, customer authorisation or documentation required.

Assessor/Workplace Mentor observation

- ☐ Carry out brake inspection using safe working practices.
- ☐ Measure brake component condition and compare with manufacturer specification.
- ☐ Remove and replace brake pads/discs or equivalent components as instructed.
- ☐ Record torque settings, thickness measurements and recommendations.
- ☐ Explain how evidence supports diagnostic and customer communication decisions.
