TASK 3: STEERING COMPONENT REPLACEMENT AND CUSTOMER RECOMMENDATIONS

Autocare Technician Level 2 | Block 7 | v2.1

TIME	EVIDENCE	PROGRAMME POINT
60 minutes	**Practical | Knowledge | Documentation**	**Weeks 61-70**

Your task

A vehicle has steering play or a worn steering component. You must inspect the relevant area, remove/refit the component as instructed, record technical data and explain the customer recommendations.

What you must do

1. Prepare the vehicle and confirm safe lifting/support arrangements.
2. Inspect steering components and identify the fault.
3. Remove and refit the component instructed by the assessor/workplace mentor.
4. Record torque settings and any alignment requirement.
5. Reinstate the vehicle and explain customer recommendations.

What good evidence looks like

SAFE SETUP

Suitable PPE, a prepared work area and controlled vehicle or equipment.

CORRECT METHOD

A logical sequence using the relevant procedure and technical information.

ACCURATE EVIDENCE

Actual readings, findings and actions recorded clearly and precisely.

SOUND DECISIONS

Appropriate recommendations, referral or authorisation supported by evidence.

You will need

- Light vehicle or steering rig
- Replacement steering component where required
- Manufacturer technical information
- Torque wrench and general tools
- PPE and Apprentice Assessment Record

SOW ALIGNMENT

Block 7 - Advanced Workshop Practice and Communication
Duties: 1-10 KSB evidence focus: K14-K20, S10-S15, B1, B2

Measurements and technical checks

Steering system type		Component replaced	
Track rod nut torque		Wheel torque setting	
Toe setting before		Toe setting after	
Alignment required yes/no		Post-repair check result	

Special tools, equipment or calibration requirements

Task evidence

PPE and precautions used

Safety-critical findings and immediate action

Work completed, findings and recommendations

Knowledge check

1. Why is steering system condition safety critical?

2. Why should the number of turns be noted when removing a track rod end?

Knowledge check - continued

3. (a) What defects may be found on steering joints or racks? (b) Why may alignment be needed after steering repairs?

4. How can steering faults affect tyre wear?

5. (a) How would you explain the repair to a customer? (b) What final checks are required before release?

Assessor/Workplace Mentor observation

- ☐ Inspect steering components safely and accurately.
- ☐ Remove and refit a steering component as instructed.
- ☐ Record torque settings and component condition.
- ☐ Identify alignment implications and safety concerns.
- ☐ Explain work and recommendations clearly.

ADAS K17 — repair checks and calibration

For steering component replacement and alignment checks, use manufacturer information for a vehicle or a clearly labelled case study:
1. Explain whether the work could affect ADAS and identify the required checks.
2. Explain any relevant static and dynamic calibration methods and equipment, or why specialist advice is needed.
3. Record your information source and referral decision. Do not assume every repair requires calibration or carry out work beyond your authorised role.

Your answer

ADAS K18 — driver assistance and responsibilities

Use a clearly labelled steering/ADAS case. Compare a warning-only feature with an active assistance feature, and explain the difference for the driver. Explain the driver's responsibilities and, within the levels of driving automation, identify the level supported by the information provided. Name the information source; do not assume features or capabilities that the example does not show.
