TASK 4: PAINT DEFECT DIAGNOSIS, REWORK PLAN AND EVIDENCE REVIEW

Vehicle Damage Paint Technician Level 3 | Block 6 | v1.1

TIME	EVIDENCE	PROGRAMME POINT
60 minutes	**Practical | Knowledge | Documentation**	**Weeks 72-85**

Your task

A finished panel has one or more paint defects. You must inspect the finish, identify likely root causes, plan rectification and record evidence for quality improvement and portfolio use.

What you must do

1. Confirm the panel area and inspect the finish under suitable lighting.
2. Identify and record each defect using accurate paint terminology.
3. Link the likely root cause to preparation, mixing, application, curing or environment.
4. Produce a rectification plan, identifying when further supervision is required.
5. Record evidence references, learning points and actions to prevent recurrence.

What good evidence looks like

SAFE SETUP

Suitable PPE, a prepared work area and controlled vehicle, component or equipment.

CORRECT METHOD

A logical sequence using the relevant procedure and technical information.

ACCURATE EVIDENCE

Actual readings, findings and actions recorded clearly and precisely.

SOUND DECISIONS

Appropriate recommendations, referral or authorisation supported by evidence.

You will need

- Finished panel, defect samples or photograph-based scenario
- Inspection lamps, defect guides and QA checklist
- Flatting/polishing awareness materials where appropriate
- Product data sheets and repair records
- Portfolio evidence review sheet

SOW ALIGNMENT

Block 6 - Process Integration, Productivity and Quality Control
Duties: D1, D5, D8, D9, D10 KSB evidence focus: K5-K9, S1, S3-S5, B1-B7
Task reference: Block_6_Task_4_Paint_Defect_Diagnosis_Rework_Plan_and_Evidence_Review

Task evidence

PPE and precautions used

Safety-critical findings and immediate action

Work completed, findings and recommendations

Knowledge check

1. Why must paint defects be described using accurate terminology?

2. How can preparation faults show through in the final finish?

Knowledge check - continued

3. (a) What are possible causes of solvent pop or micro-blistering? (b) When might polishing be suitable and when would repainting be needed?

4. How can environmental contamination affect paint quality?

5. (a) Why should defect evidence be used for improvement rather than blame? (b) What evidence should be uploaded after rectification planning?

Assessor/Workplace Mentor observation

- ☐ Inspect a painted panel using a structured quality-control method.
- ☐ Identify common defects such as runs, dry spray, dirt nibs, solvent pop or poor coverage.
- ☐ Link defects to likely root causes in preparation, environment, mixing or application.
- ☐ Plan suitable rectification or escalation without causing unnecessary rework.
- ☐ Record evidence, feedback and improvement actions clearly.
