TASK 4: SPECIALIST SURFACES, MATTE FINISH AND SUSTAINABLE CURING

Vehicle Damage Paint Technician Level 3 | Block 8 | v1.1

TIME	EVIDENCE	PROGRAMME POINT
60 minutes	**Practical | Knowledge | Documentation**	**Weeks 101-114**

Your task

A specialist surface or finish requires an appropriate refinish approach. You must identify the surface/finish, plan controls for materials and curing, and record sustainability and quality considerations.

What you must do

1. Identify the specialist surface or finish and confirm relevant technical information.
2. Determine contamination controls, abrasive restrictions and product requirements.
3. Plan a suitable curing method considering finish quality, heat risk and energy use.
4. Record waste reduction, material control and any referral requirements.
5. Explain how the selected process protects finish quality and safety.

What good evidence looks like

SAFE SETUP

Suitable PPE, a prepared work area and controlled vehicle, component or equipment.

CORRECT METHOD

A logical sequence using the relevant procedure and technical information.

ACCURATE EVIDENCE

Actual readings, findings and actions recorded clearly and precisely.

SOUND DECISIONS

Appropriate recommendations, referral or authorisation supported by evidence.

You will need

- Specialist surface samples, panels or scenario cards
- Technical data for aluminium, GRP, carbon fibre, matte or UV systems
- Separate abrasive/control materials where needed
- Booth/IR/UV curing information and PPE
- Sustainability and quality record

SOW ALIGNMENT

Block 8 - Emerging Technology, Specialist Surfaces and Sustainability
Duties: D1, D2, D5, D6, D9, D10 KSB evidence focus: K2-K5, K7-K9, S2, S3, S5, B1, B5-B7
Task reference: Block_8_Task_4_Specialist_Surfaces_Matte_Finish_and_Sustainable_Curing

Product system		Curing method	
Waste reduction action		Referral required	

Specialist surface data, matte finish guidance, curing information or sustainability references

Task evidence

PPE and precautions used

Safety-critical findings and immediate action

Work completed, findings and recommendations

Knowledge check

1. Why do matte finishes require special care during refinish work?

2. What contamination risks are linked to aluminium preparation?

Knowledge check - continued

3. (a) How can carbon fibre or GRP change preparation decisions? (b) Why should curing method be matched to the surface and product?

4. How can UV or targeted curing reduce energy use?

5. (a) What work should be referred rather than attempted without guidance? (b) What evidence would show a sustainable process decision?

Assessor/Workplace Mentor observation

- ☐ Recognise specialist surfaces such as aluminium, GRP, carbon fibre and matte finishes.
- ☐ Identify contamination, sanding, product and finish limitations before work.
- ☐ Use technical information to select safe preparation and curing controls.
- ☐ Consider waste, energy use and sustainable curing choices.
- ☐ Record the process decision and evidence clearly.
